GE Replica Crack Free Download [Updated] 2022

Replica is a small application that can be used to digitize plots, tables, and other types of graphics found in technical papers or reports into the clipboard as a range of cells in a spreadsheet or text file. This makes it easier to analyze the data, present it in a graphical form, or copy it into a word processor for further processing. Replica can be used in either of two modes: The default mode allows the user to make a selection and use mouse clicks to digitize points into the clipboard. This mode is useful for digitizing a

few points from a graphic. The second mode allows the user to draw a line, rectangle, or polygon around a portion of the graphic to be digitized. Replica has been designed to be a simple application which uses the clipboard as a way to export graphical data to a spreadsheet or text file. The clipboard can be copied and pasted into other spreadsheet or text editors. It has been specifically designed to use minimally in order to minimize memory requirements. Replica is about the size of a diskette and can be run on computers with as little as 256 megabytes of RAM. The simplicity of the application makes it useful for college level students and non-technical users. Replica is designed to be easy to use for users with minimal skills and understanding of computer software. While a somewhat difficult graphical interface has been designed, Replica can be used without a great deal of prior knowledge or experience in computer programming or programming

software. Replica can be used to digitize diagrams and tables, as well as to digitize plots. It does not have special code or user interface to recognize text or recognize special characters found in equations. If, for example, an equation or a chemical symbol is used, the application tries to obtain the value of each point in the equation or symbol and export it to the clipboard as a cell in a spreadsheet or text file. Replica is designed to work on the Windows platform. It should work on any Windows operating system from Windows 95 to the latest Windows operating system. Replica may work on other platforms, however no support will be given. Replica requires Windows and does not work on Linux or Mac OS systems. Replica works on the Microsoft Excel 97-2003, Microsoft PowerPoint 97-2003, and Microsoft Word 2000-2007 platforms. Replica does not work with the newer versions of Windows that have a graphical user interface. Replica will

work on versions of Windows as old as Windows 95. Replica is a free
