Replication timing and chromatin structure are highly conserved between species. Meiotic recombination also affects the order of chromatin marks such as H3K4me2, which is established at most of the premeiotic replication domains and correlated with their progression to late-replicating domains. The persistence of this feature is corroborated by the long-held assumption that all eukaryotes must have undergone a pattern of premeiotic replication. We developed an approach to study premeiotic replication in a histone H3K4me2 mark using the budding yeast *Saccharomyces cerevisiae* as a model system. Our research uncovered that replication of subdomains is highly conserved among distantly related yeast species, which implies that replication of the entire yeast genome has occurred. We confirm the conservation of replication of most of the genome, but not of all subdomains, during premeiotic S-phase, as indicated by the distribution of H3K4me2 in these species. On

the basis of this conservation, and on the fact that this chromatin mark is not affected in any way by the loss of subdomains, we propose that the premeiotic replication program is universal. Dalton McGuinty, the man most responsible for the Royal Ontario Museum's financial problems, says he is not being a bad actor. "I'm not a bad actor. I work hard for the public. I try to do my best for the people of Ontario," said McGuinty to reporters at Queen's Park. The Ontario government has announced a plan to save the ROM. It includes selling off the Evergreen Aviation & Space Museum, slashing job cuts at the non-profit, and soliciting more private sector investors into the project. One of the conditions of the deal is that the province not provide any funding to the museum in the near future. McGuinty made the comments while standing next to Nathan Rochon, the superintendent of the Evergreen Aviation & Space Museum, and
