Feb 11, 2019 It is clear that the activation is working since I can see all programs listed in the windows settings. The problem is that daz loader does not load programs with space after the app name. Feb 11, 2019 I think it is not daz loader thats causing the problem since when I load the daz loader directly it loads programs fine. How to install daz loader on windows 7 or 8 or 10: Install Daz Windows Loader As mentioned above, my dilemma is I got Daz Loader before Windows 10 change but after change I'm unable to launch Daz Loader on one laptop it was Daz Loader didn't work, but it was work fine on other laptop. So I've decided to use Windows loader by Daz, and it's working fine on my laptop after Windows 10 version changed but when I'm trying to load Daz Loader it's not working. In my past version it was working fine. Please help, how can I use Daz Loader? I've tried looking over the forum but didn't find any solution. Please help A: I've solved the problem. It was mostly about the fact that Daz Loader is using the old Store to store the window information. I'd discovered this, since there is a new store storage that has been recently changed. To be more specific, if you want to update your W7 activation to the newest one, you need to shut down your computer first. Open the Store and click Settings then update, and then select download and install the store app. Be sure that when you choose update store app that you select the right activation code that you have. After that, you need to reboot your computer, since the activation process takes a while to complete. After that, launch Daz Loader and everything will be working fine. Q: Is it possible to use a python list as a class data attribute? I'm trying to implement a Python class that has a list as an attribute. The list is just a list of numbers. I'm having trouble with the syntax. Here is what I have: `class CExample(object): def __init__`
