AutoCAD Crack Free Registration Code [Win/Mac]

Autodesk, AutoCAD, a registered trademark of Autodesk, Inc. Autodesk has made AutoCAD free to use in Windows and macOS (on some systems). Its latest release, AutoCAD 2020, introduced a new integrated feature, named 'Revit', which is aimed at making it easier to work with 2D and 3D models of real world objects in AutoCAD. Note: This tutorial will help users learn how to use AutoCAD or any of the other Autodesk programs that are based on AutoCAD's technology. There are other Autodesk programs like Architecture and Mechanical. We will not be covering those in this tutorial. AutoCAD Tutorial - Intro to the Basics Before we jump into AutoCAD, let's take a look at what you can expect from the application. 1. Modeling AutoCAD is designed to help users create, modify and annotate 2D and 3D models. Like a regular drawing program, you can draw shapes on the screen with your mouse. To draw a shape, first you select the tool (pencil, line, polyline or circle) from the Tools panel and then press the Enter key on your keyboard. Alternatively, you can click on the appropriate icon on the ribbon bar. You can then draw a line or make a polyline. Click on the arrow and you can add new segments, and the segments will be joined by a line. You can select parts of the line and delete them to make a new shape. Click on the middle of a line and drag to the right or left. You can also use the keyboard shortcuts F to draw a line segment and G to draw a polyline. Now that we know how to create basic shapes and segments, we can move on to how to modify them. 2. Modifying 2D and 3D Shapes When you click on a line or polyline on your screen, you see the line or polyline options. The options menu contains many options to edit or modify the line or polyline. There are two main ways to modify the line or polyline. Change the length of the line. You can double-click on the line or polyline to see the Properties palette on the bottom of the screen. Then you can adjust the length using the Height option. The line will automatically adjust in the direction of the length,
