Keralata SC Scheduled Caste (SC) Group III & IV Clerk Group III & IV / Group IV and Group V Recruitment Test 2015 - Download Papers ... How to download previous year question paper or answer key of PSC question paper. How to download previous year question paper or answer key of PSC question paper... how to download previous year question paper or answer key of PSC question paper. 1. Field of the Invention The present invention relates to a gasified ignition system for a gas burner using a cylindrical burner tube, and particularly to a gasified ignition system which is capable of simplifying the construction of an ignition system for a gas burner using a cylindrical burner tube. 2. Description of the Prior Art There are two types of conventional ignition systems available for gasification of a gas burner, i.e. a spark ignition system and a gasified ignition system. The conventional spark ignition system is based on the principle of converting combustion energy to thermal energy by burning a volatile gas with a large-scale sparking device, such as a spark plug. However, this system has a problem of high voltage and high power consumption, and an igniter has a short life in this system. To overcome the short life problem of the spark igniter, a gasified ignition system has been widely used. This gasified ignition system has a nozzle having a combustion chamber which is filled with compressed gas. When the compressed gas is discharged from the nozzle, the gas flows out, colliding with the outside air, i.e., the atmosphere, at a high speed. As a result, the gas is atomized, forming a mist. This mist flows into the combustion chamber, where the mist is ignited by the residual sparks. FIG. 1 shows a conventional gasification ignition system, as disclosed in Japanese Laid-Open Utility Model Publication No. 49-148533. Referring to FIG. 1, a pressure container 50 is connected to a gas inlet of a nozzle assembly 40. A timing pulser 42 is mounted on the upper surface of the pressure container 50. The timing pulser 42 has a rotating arm 43, a timing shaft 44, a shaft gear 45, and a shaft seat 46. A timing pulser driving shaft 47 is fixed to a prescribed position of the rotating arm 43. A timing pulser gear 48 is rotatably mounted on the shaft gear 45. An ignition sensor assembly is mounted on the upper surface of the nozzle assembly
